Secure Lock and Alarm designs, installs, and services commercial access control systems, video surveillance systems, and burglar alarms. Their skill set is unique in that they have two certified locksmiths on staff so they are able to address lock and door issues which are an important part of installing a security system.

Being a "One Stop Security Shop" allows customers to have a consistent security plan with a clear vision and one point of contact. Keith Bedrossian founded Secure Lock and Alarm in 1996 in Boston's North Shore. They serve all communities throughout Massachusetts and Southern New Hampshire.

We design door access control systems combined with cloud based video surveillance in order to view, protect, and manage your office security anywhere, anytime and on any device.

Card Access

A Brivo® cloud-based access security system allows business owners, facility directors, and property managers to have all their security managed within one system so they can make changes anytime, anywhere, and on any device

Control employee, tenant, and guest access

No software or IT specialists needed

Easily upgrade a current access system

Unlimited sites, users, and devices

Video Surveillance

Our cloud-based Video Management Systems by Brivo® allow users to link to their door access system in a single portal to view on a desktop or remote device.

Advanced bandwidth management flexibility

View live and recorded video remotely

Supports both analog and IP cameras

Resilient to network and Internet outages

Burglar Alarms

Round out your premise security with a monitored burglar alarm. Be able to know when employees arrive and leave throughout the day.

Be notified instantly when there is a breach

Sensors for valuable equipment

Protect your office from water damage

Guard against frozen pipes and

equipment malfunctions

Why Cloud Security:

A cloud based security system by Brivo® and Secure Lock and Alarm allows direct navigation of all systems on one smart device and in an extremely secure environment. Brivo® servers are in redundant T-4 data centers, so your information is protected in the event of a network or internet malfunction. If all three components are synchronized when the alarm is triggered, you can pick up your smart phone to see the video of the event, and then use the same device to open the door to "buzz" someone in. Cloud Security is the best way to insure that you have the most up to date system with a one time capital expense so the total cost of ownership is much less than a network based system.
